PROFILE

Enthusiastic front-end developer with a strong foundation in HTML, CSS, and JavaScript, and hands-on experience in building responsive and user-friendly web interfaces. Proficient in React and familiar with modern development tools like Github. Passionate about creating clean, maintainable code and enhancing user experiences. Eager to contribute my skills in a dynamic and collaborative environment.

CERTIFICATION

MERN Stack Development Course

[KGisl Micro College]

Overview: Acquired comprehensive skills in developing full-stack web applications using the MERN stack.

PROJECTS

Movie Finder

- Users can search for movies by typing a keyword, which triggers an API call to fetch movie results. The default display shows a list of popular movies.

- Clicking on any movie poster retrieves additional details (like year, rating, and plot) and displays it in a carousel-like section, enhancing user interaction with more information on demand.

- If no movies are found for a search, a message is displayed to prompt users to try again, and any errors in fetching data are logged to the console.

CRUD Application

- Built with React and Axios, the application provides an interface for managing course information, including "course" and "description" fields..

- It allows users to add, edit, view, and delete course posts, offering a clean and user-friendly experience for data entry and modifications.
